Crescent Hill Purchase Will Bring it to the Front.

TO TAP M'GREGOR'S MINE

HE HAS THE KEY TO CRESCENT ORE BODIES.

The activity displayed in securing The activity displayed in securing control of the Crescent Hill property at Park City by H. G. McMillan and associates, is leading to speculation not only as to whether the company is being absorbed by the Silver King, but as to what will be done with the great block of ground adjoining, by James McGregor, its owner. The old Crescent company is workings to the company is workings to the company is workings. The old Crescent company is workings to the control of the company in the divide and treated at Rogers' mill with excellent results. company's workings, including the long tunnel and shaft which was sunk from it are in the McGregor ground, and he controls every foot of territory between there and a point near Park City, through which a tunnel has been projected for the purpse of developing any veins lying across its route and to drain and make accessible the monbodies known to exist below the water level in the Crescent ground,

The water level in the Crescent ground, proper.

The gentleman's plan of bringing the section described to the front is a big one, and contemplates the expenditure of several hundreds of thousands of dollars, but he has everything so well laid out and the chances of making one and possibly several big mines are so great that it is not thought likely that he will be long in perfecting arrangements to carry it through.

When last approached on the subject he pleaded that while progress was being made he was not yet prepared to say just what would be done, but that the scheme will be launched in the near future is now pretty well understood, and when it is, doubting Thomases and "knockers" will have to stand aside and let the good work go on, for it will in the face of all opposition.

All plans for the work are out and its feasibility and ultimate productiveness are so apparent to those familier.

All plans for the work are out and its feasibility and ultimate productiveness are so apparent to those familiar with camp and the trend of its ledges that every one of them whose interests are not affected freely admit that its consummation will mean more for the district than anything which has happened in many years.

A COMMENDABLE INNOVATION. All Mining Companies Should Emulate the Con. Mercur.

The record which is being made by the Consolidated Mercur Gold Mines company and its frank method of issuing a monthly statement of its operations to its shareholders and the pubis a matter of such general and favorable comment in mining circles that, as one well known mining man express

it is a pity that the management of producing and dividend-paying nes of the state don't adopt the same mines of the state don't adopt the same plan. Nothing would redound more to the benefit of the industry or go farther in creating a feeling of confidence among investors than a monthly or even quarterly statement showing the production, profits, expenditures, reserves or even indebtednes of these companies and if they were not so selfish I believe they would adopt the plan."

c' closing, the information was given out at the Consolidated Mercur offices yesterday that the month's run would be represented in the treatment of not less than 20,000 tons of ore, with the values and extraction equal to the average. The disclosures of new oxidized ore bodies in the Electric tunnel, Asore bodies in the Electric tunnel, Assistant Manager Dern stated, were proving up well, and though no word had come from Superintendent Edwards during the past few days, he had no doubt that the strike would add materially to the already magnificent reserves blocked out.

Equally as interesting must have been treath owing to the policy of the management nothing concerning the mine's condition rarely gets beyond.

mine's condition rarely gets beyond the confines of the directors' chamber while statements of its financial con-dition and methods of doing business dition and methods of doing business are not obtainable by even the shareholders, without they go and make a personal inspection of the books of the company. The illustration is given not because anyone doubts either the honesty or ability of the management, but for the purpose of showing what a convenience it would be and how much it would tend to stimulate faith, not only in the property, but in the whole district where it is situated, could the management be induced to part with the information.

The Consolidated Mercur has set an example that all companies should and

example that all companies should and certainly could afford to follow.

HIGH-PRICED COPPER.

Its Effect on the Shares of Copper Mines.

(Boston News Bureau.) Mr. N. L. Amster, mining engineer, says of the copper market: "The condition of the copper metal market warrants today better prices for the shares

of the producing copper mines than it did in the height of the boom in 1899. did in the height of the boom in 1899.

"In 1899, we were just entering a period of comparatively high prices for copper. It was an experiment, and few people believed that the advance could hold. There was talk of enormous increase of production and a decrease in demand as a result of the high level. But we have had almost two years of stable prices, so that what was really an experiment has now become an established condition. There has been very little increase in production and certainly no decrease in the demand.

"That the ruling price for copper the past two years has not been artificial

past two years has not been artificial is proven by the fact that with a 17 cent market for the metal, the visible supply today is less than half what it was in 1895, when copper sold at 10 cents.

I have had some of the largest manufacturers tell me that they would much rather have a stable 15 cent market than a mark t fluctuating between 9 and 13 cents. The fluctuations of past years were due to the unorganized condition of the copper industry. Today the copper producing interests are under the copper producing int

ingmen in all underground mines or workings, and in smelters and all other institutions for the reduction or refining of ores or metals shall be eight hours per day, except in cases of emergency where life or property is in imminent danger. Any person, body corporate, agent, manager or employer who shall violate any of the provisions of this section shall be deemed guilty of a misdemeanor."

ANOTHER MILL FOR BINGHAM. The Butterfield Company Will Erect a Thirty-Ton Plant.

(Bingham Bulletin.) Manager George W. Keel of the Buterfield Mining company says he has placed an order for mill machinery. A ite is to be prepared without unneces-

divide and treated at Rogers' mill with excellent results.

As stated in our former article, Queen tunnel taps Eagle Bird vein at 800 feet depth. Butterfield tunnel, when extended about 165 feet further, will cut it at an actual depth of over 2,200 feet on the dip. The output of Eagle Bird and other veins will then be treated at concentration works to be built at concentration works to be built at mouth of the Butterfield. And it may be inferred that all the great reduc-tion plants that may come to Bingham have not yet been commonly discussed.

THE TRAPPER MINE LEASED. Company Will Defer Running a Tunnel Till Spring.

A. E. Hyde returned yesterday mornng from the property of the Trapper ompany at Boulder, on the Wood rivcompany at Boulder, on the Wood river above Ketchum. He says that over three feet of snow is on the ground up there, and that winter may be said to have fairly opened. The purpose of the company had been to start a tunnel with which to open the mine about 1,000 feet deep, or 700 feet below the present workings, but he decided it was too late to commence, and the work will therefore go over till spring.

Before leaving he arranged to give William Schultz of Ketchum a one-year lease on the upper workings, in which the vein at water level averages about two feet wide and carries from 150 to 260 ounces silver and 65 per cent

about two feet wide and carries from 150 to 260 ounces silver and 65 per cent lead. Mr. Schultz's lease will not interfere with the work to be undertaken by the company in the spring, which is designed to drain the ledge and put the company in shape to make heavy and profitable shipments next season.

CHLORIDE POINT MILL TO CLOSE The Miners Working on Second-Class

Ore Laid Off Yesterday. The management of the Chloride Point company yesterday paid off and discharged all miners that were engaged in mining milling ores, retaining on the pay rolls only those who are working on high-grade shipping material, an encouraging body of which seems to be opening out on the third level. When the bins at the mill are empty the mill will therefore he closed.

empty the mill will therefore be closed down for the winter. This action was taken because the treatment of second-grade ores has not heretofore proven profitable during the winter months, and for the further reason that it is the purpose of the company to reorganize its affairs during the coming winter and prefect an exten oming winter and perfect an exten-ive system of development in the mine. It is therefore more than probable the the force just laid off will be more than made up in the number of men put of prospecting work in the near future.

SHOWING IN THE RUSTLER.

Lessees Are Taking Out Good Ore In the Old Alta Mine.

After an idleness of many years a ease has been secured on the old Rustler mine at Alta by L. A. Copeland tler mine at Alta by L. A. Copeland and others and since operations began, a few weeks since, in a drift west of the 1,268 foot tunnel two and one-half feet of ore has been developed from a very small streak and samples just brought down and assayed show the rock to contain forty-three ounces silver, 6 per cent lead. 06 ounce gold and 15 per cent zinc. The ore, Mr. Copeland says, gives every evidence of widening as work progresses.

as work progresses.

The property lies directly north of the Albion, which is now making such a fine record, and the lessees believe they have a good thing. The property is owned by Judge Anderson of this city and others

REPLACED BY CARBONATES.

A Remarkable Change In the Sulphide Vein at the Swansea.

After making an examination of the great change which has just taken place in the winze being put down from the 850 to the 1,000-foot level in the Swansea, President Holman and Man-ager Theron Geddes returned to town Friday night. Mr. Geddes says the

to work?" It is evidently not lawful to work over eight hours at such employment, and the employee and employer are both equality of a misdemeanor where such work is performed and permitted.

The question is fully covered by section 1337 of the revised statutes of 1898, the law having been passed by the legislature in 1896 and later incorporated as a part of the statutes of the year named. The constitutionality of the law was affirmatively decided in the test case of the state vs. Holden. It reads as follows:

"The period of employment for work-"

"The period of employment for work-"

Talk of substituting steam is frequent.
At the Kansas group in Freeman gulch, operated by Snyder & Anderson, a small boarding house and bunk house is being built in preparation for winter work. Next month a track and cars will be installed in Kansas No. 1 tunnel.

A Fair Week's Business Was

Metal Market.

Mining Notes.

Directors of the Ridge & Valley com-pany will visit the mine today. The Swansea company closed the week with a shipment of five cars of ore.

resterday's market.

Pintle this morning.

Another five cars of Carissa gold ore eached the market yesterday and will be settled for tomorrow. Frank E. Wilson's host of friends will be pleased to learn that he is rapidly convalescing and will soon be down town

The Horn Silver mine of Frisco was a

The Taylor & Brunton sampler yester-day reported the receipt of eleven cars of ore from Tintic, two from Bingham and two from Frisco.

Fifty or sixty barrels of burning

Fifty or sixty barrels of burning pitch and clouds of dense smoke at the Morrison & Merrill lumber yard on Fourth West and South Temple streets were the cause of a big fire scare in the western part of town about 3 o'clock yesterday afternoon.

The burning tar spread over the ground and the place threatened to become a small lake of flaming pitch, but a quick response of No. 2 fire department and two streams of water soon put the fire out. The fire was started by some overheated pitch from the still coming in contact with the air. Heber Perkins, the ma. ager of the works, was drawing some boiling tar from the still when it suddenly burst into flame and quickly ignited the trough of tar below. Perkins made a desperate effort to shut off the stream, but it was blazing so fiercely that has held its own, and during the week distributed a dividend of 2c a share. The mine is now in prime condition, both as regards development and equipment, and as all heavy expenditures for improvements are now at an end, at least for some time to come, dividends are expected to come frequently.

Yankee Consolidated closed the week ago.

The little fellows all held their own, and equipment, and as all heavy expenditures for improvements are now at an end, at least for some time to come, for improvements are now at an end, at least for some time to come frequently.

Yankee Consolidated closed the week is much better form and soid yesterday at 19% c, as against 17% cone week ago.

The little fellows all held their own, and equipment, and so all heavy expenditures for improvements are now at an end, at least for some time to come, and equipment, and as all heavy expenditures for improvements are now at an end, at least for some time to come, and equipment, and as all heavy expenditures for improvements are now at an end, at least for some time to come, and equipment, and as all heavy expenditures for improvements are now at an end, at least for some time to come, and equipment, and as all heavy expenditures for improvements are now at a could not get to the valve. In a moment almost the burning tar had reached a pile of barrels standing near and they were quickly in flames. The barrels were all full and burning tar began to run in every direction, filling the air with clouds of tar smoke and fumes.

When the fire was extinguished it was found that nearly all of the barrels had been more or less damaged and many of them had been entirely destroyed. The contents of the still, which had been entirely destroyed. destroyed. The contents of the still, which holds thirteen barrels or more, were spilled on the ground and lost. The still itself, though, being of brick, was not damaged. The loss on the whole is placed at about \$200, on which there is no insurance.

IN THE POLICE COURT.

John Cureton, a laborer, who had imbibed too much of the inebriating fluid, made his debut in the police court yesterday afternoon. Cureton, it is said, while under the influence of the liquor, had unceremonlously taken a stick pluout of a stranger's scarf, but was detected and gave it back. The defendant acknowledged that he had been rather bold, but said he meant no harm. The judge toid him that his conduct would cost his \$5 or five days in the canyon.

John Tremhella, a Rock Island employee, was charged with keeping a vicious dog. The complaint was made by a Mrs. Martin, who claimed that the canine had bitten her. She said that in looking for another person she went to Mr. Tremhella's residence and while standing at the front door the dog rushed up and bit her through her clothing, leaving slight marks of his teeth on her limb. The lady said she only wanted to see that the dog was not allowed to bit any one else and, as the defendant promised to muzzle the canine, he was discharged.

F. Hendrickson, the thief who was charged with stealing a pair of boots from A. W. Felt's sample room, was found guilty of petit larceny and given four months in the county Jall. John Cureton, a laborer, who had im-
